Moscow, Russia

Summary

I have been studying web programming for 7 months. During this time, I managed to read [learn.javascript](#) and a series of books "You don't know javascript". At first I practiced on [codewars](#) and then started doing projects in parallel, studying frameworks and other technologies. At the moment I am fluent in the language and understand how modern web technologies work.

Projects:

- [WebSocketChat](#) - this is an online chat with registration, authentication and the ability to create group chats. The project was built with Nodejs, Express, MongoDB, websocket.
- [DiscordBot](#) - my first project, a simple bot made with nodes and deployed on heroku. In this project, I improved my understanding of the language, learned how the server works and how to deploy projects.
- [Portfolio](#) - this is a site with information about me and my projects (site currently developing). In this project, I study and practice with AWS Lightsail, Linux, Nodejs, HTTP/HTTPS, shell.

Education

Software Engineering

The college of Godovikov

2020-2023
